Application for AI Engineer

Dear Cronos.ai team,

I recently completed my master's in Artificial Intelligence at KU Leuven, and I would like to apply for an AI Engineer position at Cronos.

Cronos brings AI into practice across many sectors, through specialised teams that work closely with their clients. The recently launched AI Lab, where new ideas are tested quickly on real business challenges, shows that the group keeps moving into new kinds of AI work. That is the kind of environment I see myself in: hands-on, close to the client, and with problems that differ from one project to the next.

My master's thesis is the clearest example of my work. Using brain recordings from two hospitals, I built a machine learning pipeline that predicts the outcome of epilepsy surgery. I then turned the models into a desktop tool where a user can upload a recording, run a prediction and explore the result in 3D. Building both the models and the tool around them gave me experience across the full project, from raw data to the end user.

Alongside my studies, I fine-tuned a small vision-language model to control a simulated robot arm from camera images and written instructions, reaching 91% success on a standard benchmark. I have also built computer vision tools for video: a hand-tracking pipeline that turns ordinary footage into training data and, as a diver, a tool that removes the blue haze from underwater 4K video and restores the colours.

Outside of technical work, I am a scuba diving instructor and have trained and certified more than 50 divers. This has taught me to explain technical matters clearly and to take responsibility for others. As a freelance web developer, I delivered websites directly for clients, which gave me first-hand experience of working to a client's needs.

I live in Leuven, speak Dutch and English, and am happy to work on site with clients. I would welcome the opportunity to discuss how I could contribute to Cronos. My CV is attached. Thank you for your time and consideration.

Kind regards,

Tristan Engelborghs
